The product contains an antihistamine that may cause dryness and may have additive central nervous system (CNS) effects with alcohol or other CNS depressants (e.g., hypnotics, sedatives, tranquilizers). Antihistamines should be used with caution in patients with stenosing peptic ulcer, pyloroduodenal obstruction, and urinary bladder neck obstruction due to symptomatic prostatic hypertrophy and narrowing of the bladder neck. Administration of Carbetapentane may be accompanied by histamine release and should be used with caution in atopic children.

PRECAUTIONS GENERAL
Antihistamines are more likely to cause dizziness, sedation, and hypotension in elderly patients, and therefore should be used with caution. Antihistamines may cause excitation, particularly in pediatric patients, but their combination with sympathomimetics may cause either mild stimulation or mild sedation. Use with caution in patients with hypertension, cardiovascular disease, hyperthyroidism, diabetes, or narrow angle glaucoma.

VAZOTAN TANNATE SUSPENSION should be used with caution in sedated patients, and in patients confined to the supine position. INFORMATION FOR PATIENTS: Caution patients against drinking alcohol or engaging in potentially hazardous activities requiring alertness, such as driving a car or operating machinery, while using this product. Patients should be warned not to use this product if they are now taking a prescription monoamine oxidase (MAO) inhibitor (certain drugs for depression, psychiatric or emotional conditions, or Parkinson's disease) for 2 weeks after stopping the MAO inhibitor drug. If patients are uncertain whether a prescription drug contains an MAO inhibitor, they should be instructed to consult a health professional before taking this product.

DRUG INTERACTIONS
MAO inhibitors may prolong and intensify the anticholinergic effects of antihistamines and the overall effects of sympathomimetics agents. Patients may develop hypotension, hypoglycemia, nausea, myoclonic leg jerks, and coma. Concomitant administration of MAO inhibitors and Carbetapentane. Thus, concomitant administration of VAZOTAN TANNATE SUSPENSION and MAO inhibitors should be avoided. (See "CONTRAINDICATIONS", CARCINOMAGENESIS, MUTAGENESIS, IMPAIRMENT OF FERTILITY).

Indications and Use
VAZOTAN TANNATE SUSPENSION is indicated for the symptomatic relief of cold, nasal congestion, and cough associated with the common cold, sinusitis, allergic rhinitis, and other upper respiratory tract conditions.

Contraindications
VAZOTAN TANNATE SUSPENSION is contraindicated in patients sensitive to any of the ingredients or related compounds. Contraindications are for use in the treatment of lower respiratory tract symptoms, including asthma. Phenylephrine is contraindicated in patients with hypertension or with peripheral vascular insufficiency (ischemia which may result with risk of gangrene or bromaemia of compromised vascular beds).

VAZOTAN TANNATE SUSPENSION should not be used in patients receiving a monoamine oxidase inhibitor (MAO) (see "PRECAUTIONS DRUG INTERACTIONS"). Use caution in patients with hypertension, cardiovascular disease, hyperthyroidism, diabetes, or narrow angle glaucoma.

Adverse Reactions
The most common adverse effects associated with antihistamines have been dryness, sedation, dryness of mucous membranes, and gastrointestinal effects. Serious side effects often occur in patients with other antihistamines, sympathomimetics, and antihistamines have been used. Occasionally, other adverse reactions may include: Dermatological - urticaria, drug rash, photosensitivity, pruritus. Cardiovascular - hypotension, hypertension, cardiac arrhythmias, palpitations. Central Nervous System (CNS) - disturbed coordination, tremor, irritability, insomnia, visual disturbances, weakness, nervousness, convulsion, headache, euphoria, and dysphoria. Genitourinary - urinary frequency, difficult urination. Gastrointestinal - epigastric discomfort, anorexia, nausea, vomiting, diarrhea, constipation. Respiratory - tightness of chest and wheezing, shortness of breath. Hematologic - hemolytic anemia, thombocytopenia, agranulocytosis.
VAZO Tan

Brompheniramine Maleate 6 mg
Phenylephrine HCl 10 mg
Carbetapentane Citrate 25 mg
TANNATE SUSPENSION

- **12 HOUR RELIEF**
- Utilizes a unique patented TCT technology
- Convenient BID dosing
- Strongest Non-Narcotic cough suppressant
- 1(1/2) times as effective as codeine
- Great Bubble Gum Flavor!

**VazoTan Dosage and Administration**

**Over 12 years of age**
2 tsp. B.I.D.

**Children 6-12 years of age**
1 tsp. B.I.D.

**Children 2-6 years of age**
1/2 tsp. B.I.D.

Children under 2 years of age - Consult Physician
